Grant Resource – US Department of Health and Human Services

Category – ARRA - Comparative Effectiveness Research on Upper Endoscopy in Gastroesophageal Reflux Disease, Eradication Methods for Methicillin Resistant Staphylococcus aureus and Dementia Detection and Management Strategies (RC4)

Description - This FOA invites applications to conduct initial or preliminary comparative effectiveness research projects in targeted, high-priority areas in which such efforts have been lacking. CER encompasses a wide array of methodologies, including technology assessment, meta-analysis, systematic reviews, observational studies, and experimental trials. Comparative effectiveness research is the conduct and synthesis of research comparing the benefits and harms of different interventions and strategies to prevent, diagnose, treat and monitor health conditions in “real world” settings. The purpose of this research is to improve health outcomes by developing and disseminating evidence-based information to patients, clinicians, and other decision-makers, responding to their expressed needs, about which interventions are most effective for which patients under specific circumstances.

Size of Grant – 18 awards of \$1,250,000 over 3 years

Cost Sharing or Match – No

Deadline Date – February 26, 2010

Grant Resource – US Department of Health and Human Services

Category – ARRA - Methodology Development in Comparative Effectiveness Research (RC4)

Description – This FOA invites applications to enhance, develop, or evaluate methodologies to improve the efficiency, validity, and credibility of comparative effectiveness research (CER) studies. Research to improve CER methods is seen to be necessary given the well-known limitations of commonly applied methods, ranging from technology assessments to prospective observational studies and large-scale randomized trials. Recent advances in the capacity and uptake of information technology and statistical sciences present a unique opportunity to address a number of long-standing barriers to expansion of CER and CER findings, including assessing and limiting confounding biases in observational studies and improving efficiency and generalizability of randomized trials. These advances, however, have not been adequately studied in the area of comparative effectiveness, leaving a substantial opportunity for improvement that could be met in part by successful applications to this FOA.

Size of Grant – 7 awards of \$1,500,000 for 3 year projects

Cost Sharing or Match – No

Grant Resource – National Science Foundation

Category – Integrative Graduate Education and Research Traineeship Program (IGERT)

Description – The Integrative Graduate Education and Research Traineeship (IGERT) program has been developed to meet the challenges of educating U.S. Ph.D. scientists and engineers who will pursue careers in research and education, with the interdisciplinary backgrounds, deep knowledge in chosen

disciplines, and technical, professional, and personal skills to become, in their own careers, leaders and creative agents for change. The program is intended to catalyze a cultural change in graduate education, for students, faculty, and institutions, by establishing innovative new models for graduate education and training in a fertile environment for collaborative research that transcends traditional disciplinary boundaries. It is also intended to facilitate diversity in student participation and preparation, and to contribute to a world-class, broadly inclusive, and globally engaged science and engineering workforce.
