

### 1.3.1. Ethnicity by District Cluster

- When ethnicity is examined using the district clusters, the most urban districts (cluster 1) show a large percent of African Americans (21%).
- This percentage drops off dramatically in subsequent clusters, and declines as the clusters represent smaller and smaller districts.
- The percentage of Native Americans increases with the smaller clusters, the largest percentage (9%) being for cluster 10, where districts have less than 26 educators.
- Hispanics show mixed results, but the largest numbers are for clusters 1 and 2, the most urban among the districts.
