DETAILS:

The XSEDE Scholars Program is a year-long program for US students from underrepresented groups in computational sciences.

The program provides opportunities to learn more about high performance computing and XSEDE resources, network with cutting-edge researchers and leaders, and belong to a cohort of student peers to establish a community of academic leaders.

XSEDE 2013-14 Scholars will receive a travel grant to attend the XSEDE13 conference in San Diego, July 22-25, 2013 and will participate in at least six online technical training and mentoring webinars with other scholars throughout the year.

Underrepresented minority undergraduate or graduate students, studying at research institutions, who are interested in the computational sciences, are especially encouraged to apply.

The online application is located at:

<http://bit.ly/xsedescholars>

Application deadline: Monday April 1, 2013

The XSEDE Scholars Program is directed by Dr. Richard Tapia, Rice University professor and 2011 National Medal of Science recipient.

For more information, contact program manager, Ruth Kravetz, at rkravetz@rice.edu or visit <https://www.xsede.org/xsede-scholars-program>.

XSEDE, the Extreme Science and Engineering Discovery Environment, is the most advanced, powerful, and robust collection of integrated digital resources and services in the world.
